

4.2 Stop

Mainstation

1. Press “0” on the control panel to stop.
2. Turn off the water supply.
3. Close the air supply(A, Fig 10)

Note: It is important to shut off the water and air when the machine is left after use because:

- If the air supply is open when the main station and satellites are not in use, air may seep into the water pipe. If this is the case the system may have to be bled again.
- The water separator, which is a part of the air regulator (if mounted), is only to be emptied when the air is shut off.

It may be necessary to bleed the pipes and the main station again after it has been closed for a longer period of time (holidays, and the like)

4.3 Rinsing the chemistry supply

IMPORTANT: The chemistry supply must always be rinsed thoroughly after use.

Remains of detergent or disinfectants can clog the chemistry supply so it needs to be rinsed or replaced. The following procedure will clean detergent and/or remains of disinfectants.

1. Remove User Pack, if any
2. Hold the rinsing bottle with clean water tightly against the suction opening (with User Pack) or against the hose (without User Pack). Alternatively, you can place a User Pack with clean water in the holder or – without User Pack – place the hose in a bucket of clean water.
3. Activate the hose handle until clean water comes out of the nozzle (approx. 30 seconds)

Note: This procedure should be followed for both the detergent and disinfectant side if this is installed.

5. Service

Service may only be carried out by authorized and qualified personnel.

Warning: The system must only be serviced when there is no voltage or pressure on the system.

1. Turn off the main switch at the control box
2. Open a water outlet to depressurise the system .

5.1 Components

5.1.1 Pumps/motor

Pumps/motor are maintenance free, see section 2.2

5.1.2 Control system

Maintenance free

If defective: Call a service technician

5.1.3 Flow trigger

Maintenance-free.

If defective, replace the flow switch.

Installation instructions, see Appendix 110001767.

5.1.3.1 Adjustments of flow switch

1. Press “0” on the control panel to stop the system.
2. Remove the cover.
3. Turn the “rinse/foam” handle to foam position.
4. Activate the spray handle on the outlet hose so water runs out.
5. Check that the flow switch is turned the correct way (the wire must follow the follow direction).
6. Turn the brass screw at the bottom of the hole until a green diode lights up.
7. Close the spray handle again and check that the red diode lights up.
8. Mount the cover.

5.1.4 Non-return valve/inlet side

Maintenance-free.

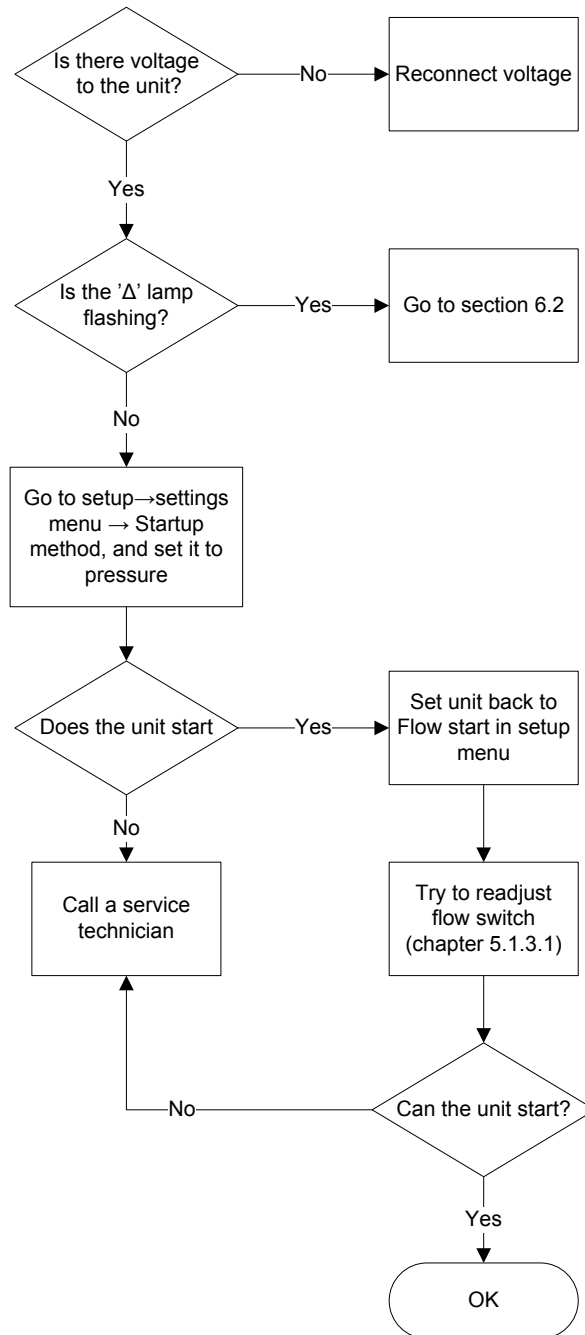

Exchange the non return valve if defect.

5.2 Recycling and scrapping

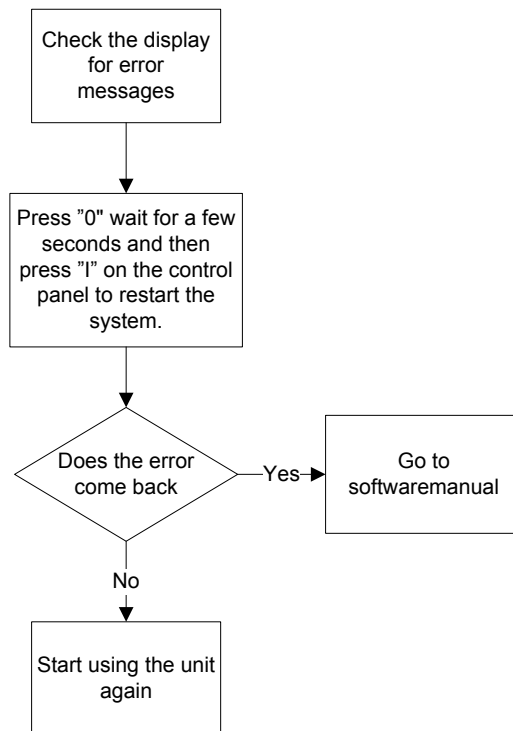

Recycle the wrapping and scrap the machine according to recommendations from the local authorities.

6. Troubleshooting

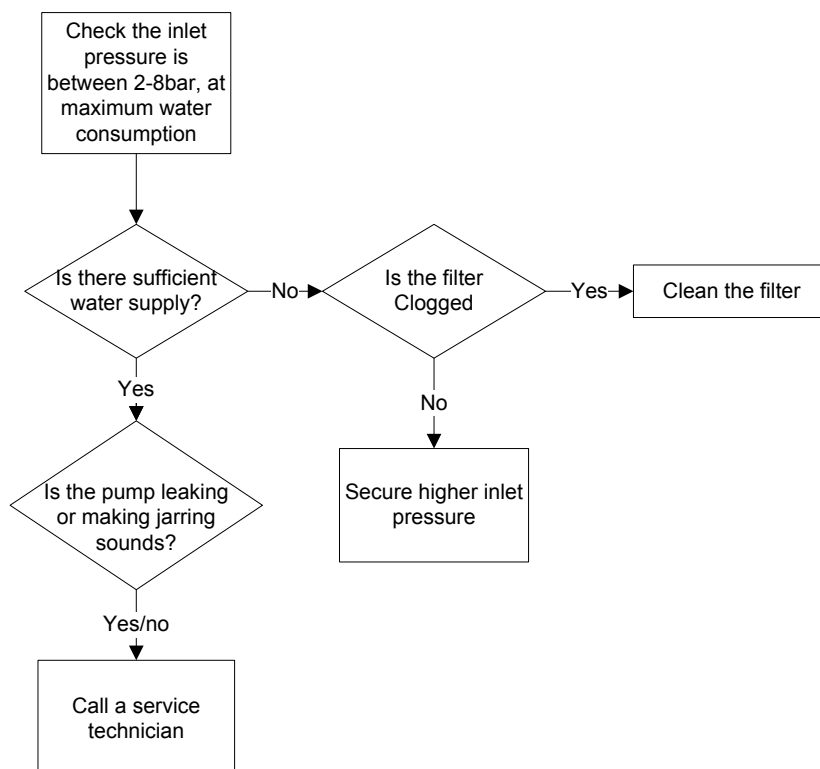

6.1 The unit does not start

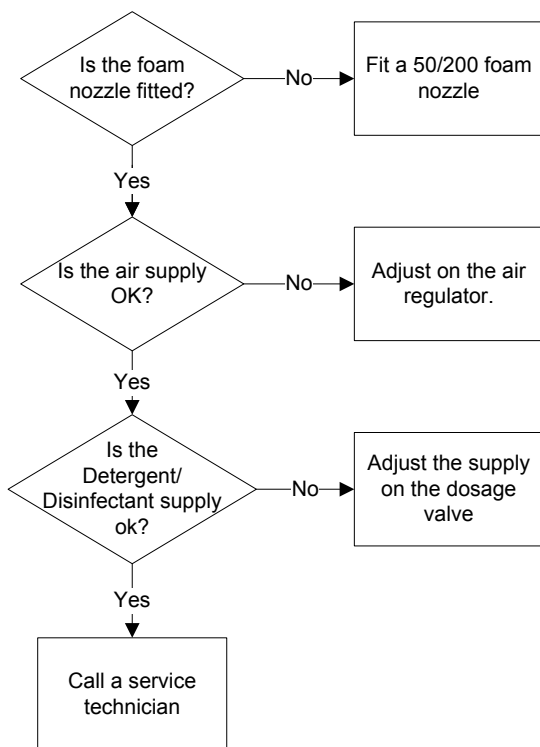

6.2 The “Δ” lamp on the control panel is on

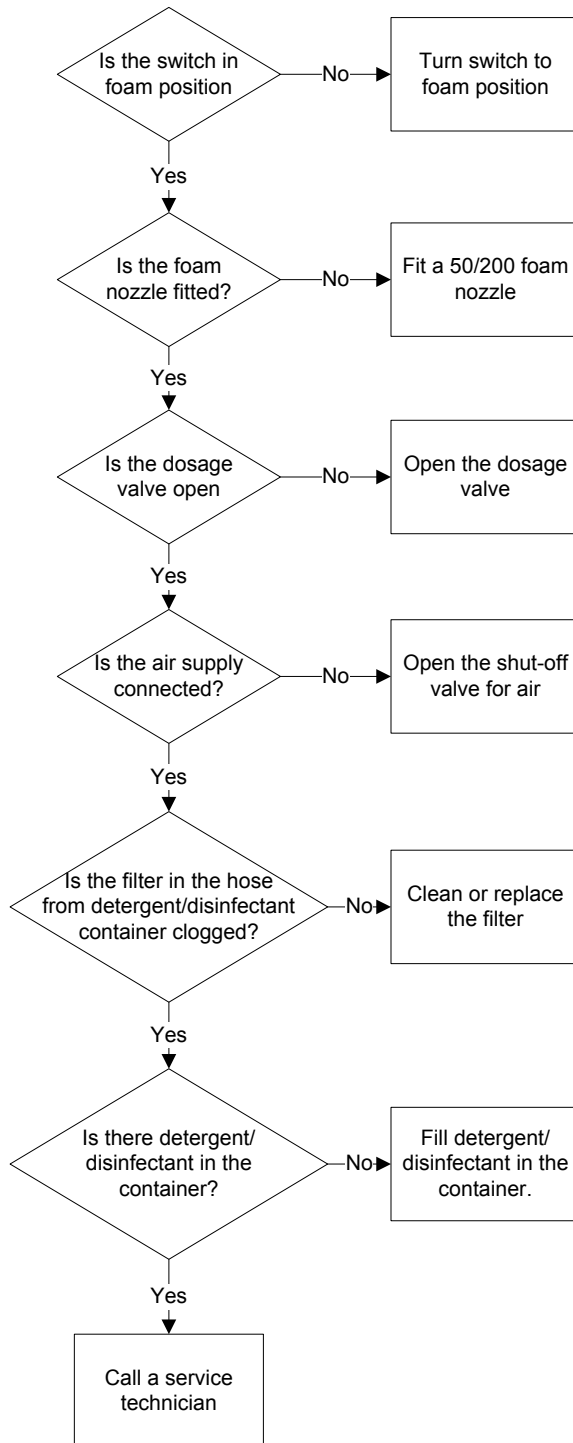

6.3 Too low or unstable pressure

6.4 Unsatisfactory foam quality

6.5 No foam

7. Recommended spare parts

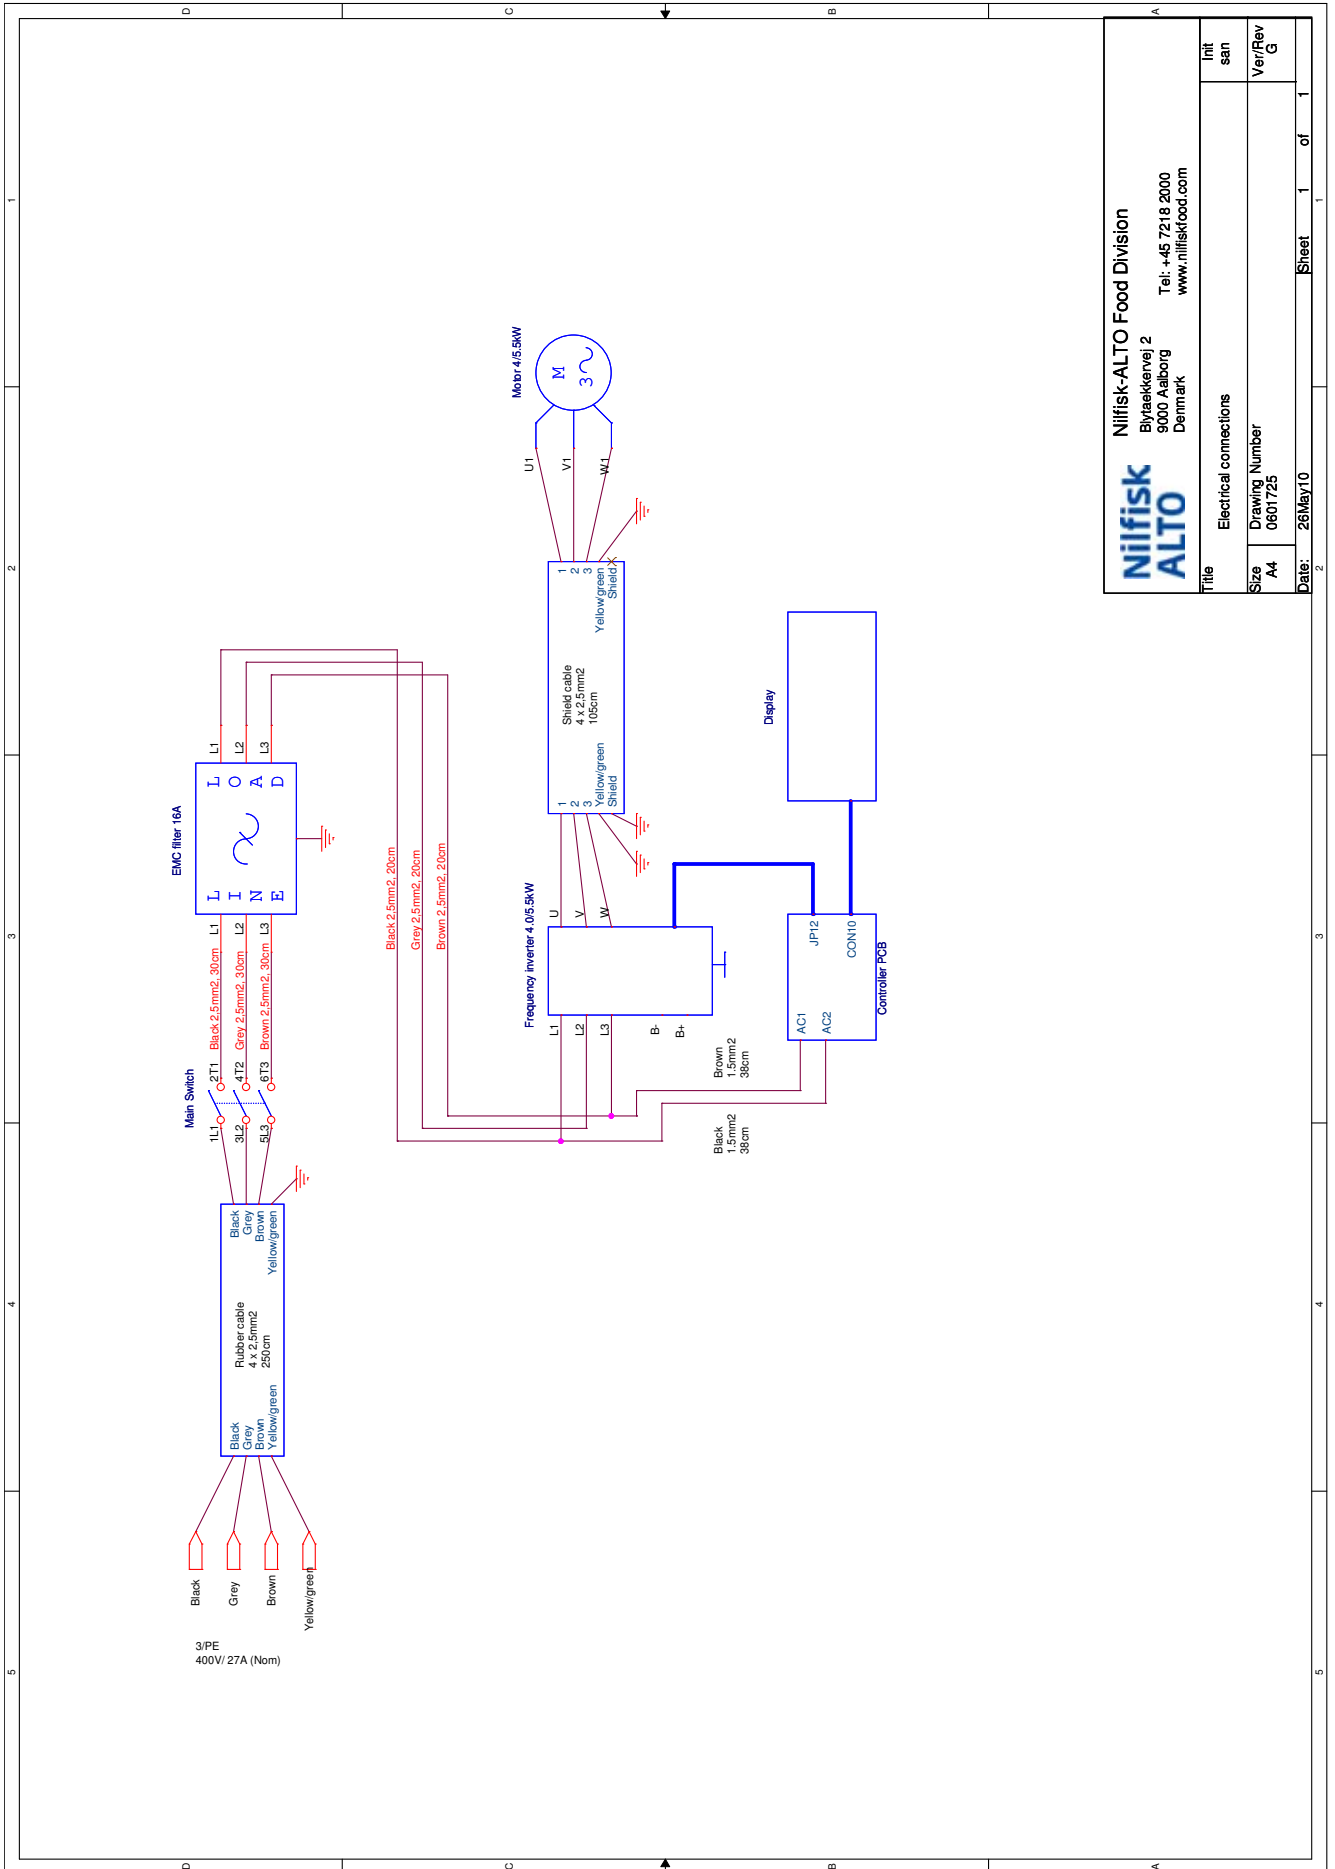

The recommended spare parts are marked with * in the spare part manual.

8. Specifications

The most important specifications are shown on the serial plates on the main station/satellite and pump, respectively.
